### WHEN TO REPLACE YOUR STARTER MOTOR:

If you notice slow cranking, clicking sounds or grinding noises during start, it could be time to switch out your starter.

### MAINTENANCE AND TIPS:

- Keep battery terminals clean — low voltage from debris can damage starters
- Inspect wiring and ground connections regularly
- Avoid cranking the engine for long periods
- Check for oil leaks
- Pro tip: when replacing a starter, also test your batteries and alternator — many starter failures are caused by weak electrical systems, not the starter itself
